EUROREPAR

PRESS RELEASE

# EUROREPAR PARTICULATE FILTER:

## a range to suit the current fleet in circulation

**As compulsory part of diesel cars since 2011, a particulate filter installed on the exhaust system ensures compliance with the European Union's emission standards' requirements, by reducing the emission of particle pollution. In response to an ageing fleet in circulation and stricter safety inspection standards concerning exhaust fume opacity in vehicles, Eurorepar has expanded its range of particulate filters for light diesel vehicles and light utility vehicles.**

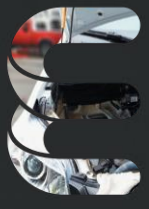

Modern driving conditions (in particular in cities) cause particulate filters to be clogged up faster. They may crack and become less effective, requiring early replacement.

In order to be suitable for any vehicle in your workshop, the Eurorepar particulate filter range includes both manufacturing technologies: silicon and cordierite, which both adapt well to certain situations, such as older vehicles, exclusive or predominant use in cities or on motorways, etc.

The Eurorepar particulate filter range includes 51 products, including 13 for vehicles in Stellantis brands (Citroën, DS Automobiles, Opel, Peugeot, Alfa Roméo, Chrysler, Fiat, etc.) and 38 for other brands on the market.

The Eurorepar particulate filter range has been approved in accordance with EU directives, and is subject to a range of tests in order to comply with the performance and quality standards required by Stellantis engineers and technicians. The range is affordable for any repair agents, and meets the brand's quality, price and performance requirements.
