EUROREPAR

PRESS RELEASE

Eurorepar is expanding its range of lubricants with the launch of the 0W-20 grade oil

In order to meet the requirements of new vehicles, Eurorepar is expanding its lubricants range for engines (diesel, petrol and hybrid) and gearboxes in light vehicles and light commercial vehicles.

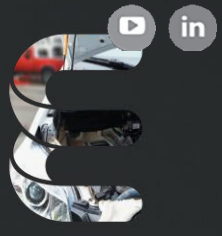

7 new products will be added to the Eurorepar engine lubricants range, bringing the number of products in the range to 18 and covering 95% of the motor vehicle fleet in Europe. Included among these new products, the 5W20 oil is designed for Ford EcoBoost petrol engines, as well as the 0W20 oil which strengthens parts against wear and tear and provides resistance to deposit build-up with maximum performance at both hot and cold temperatures. With its low viscosity, the 0W20 oil helps to reduce CO2 emissions by ensuring the anti-pollution system operates correctly.

The 0W20 oil has a complex design, and comes in a wide range of products, each dedicated to different specific applications in the vehicle. As a result, Eurorepar has decided to include 6 approved products in its range, each complying with specific specifications from manufacturers such as: PEUGEOT, CITROËN, DS, OPEL, VOLVO, TOYOTA, RENAULT as well as VAG/MERCEDES.

An oil product for automatic gearboxes (6-8 gears) which complies with the ATF standard has also been added to the range.

The Eurorepar lubricant range is one of the widest in the market. It is available from Distrigo hubs and affordable for all repair agents.
