ACCESSORY BELT KIT

ENGINE PARTS

THE "ALL IN ONE" SOLUTION

EXPANSION + 05 réf.

PRODUCT ADVANTAGES

- Long service life and good reliability: compatibility between the tensioner/pulley and the belt.
- 1 full kit = easy to identify, easy to assemble, optimized price.

With its current range of 137 products covering over 40% of the average European fleet in circulation, the Eurorepar accessory belt kits range is optimized to provide the right balance between quality, price and performance.

The accessory belt is a part which, when used with the crankshaft pulley, helps the engine to drive peripheral components such as the alternator, the A/C compressor, the power steering pump and sometimes the water pump. In some vehicles, the accessories are driven by multiple belts.

The compatibility between the belt tensioner and the belt ensures the kit operates properly and remains durable.

DID YOU KNOW?

Most often, the best solution is to completely replace the accessory belt kit.
Furthermore, the belts are more durable if the tensioners/pulleys are changed at the same time

CONTENT OF THE KIT

The kit is adapted to every vehicle.
It contains:

- One or more idler pulleys.
- One or more belt tensioners.

HIGH-QUALITY TAILOR-MADE PACKAGING

The presentation in an all-in-one box allows:

- A complete offer that guarantees technical compatibility between each component
- A clear commercial range that is easy to sell with one part number per application.
- A more attractive logistical and commercial solution.

CONDITIONS FOR REPLACEMENT

- The belt itself is the cornerstone of the accessory belt. This wearing part must be inspected every time the vehicle is serviced.
- There are several signs that a belt kit is damaged:
- Visible cracks on the belt.
- Foreign objects can enter the belt.
- Visible rust and cracks on the belt tensioners.
- Rolling noise (rollers).
- The belt's surface becomes shiny and smooth.
- The engine is overheated.
- The A/C system only gives off hot air.
