STANDARD BATTERY

24 REFERENCES
95% coverage rate

ADAPTED RANGE! Access; Exact Fit; Upgrade

COLD STARTING
-18°C

PRODUCT ADVANTAGES

- → ***A range that can be adapted to the energy needs and age of the vehicle***
- → ***Reliable starting power in even the most demanding climatic conditions***
- → ***Durable and resistant to corrosion***
- → ***Batteries produced in Europe with partners who are market leaders***

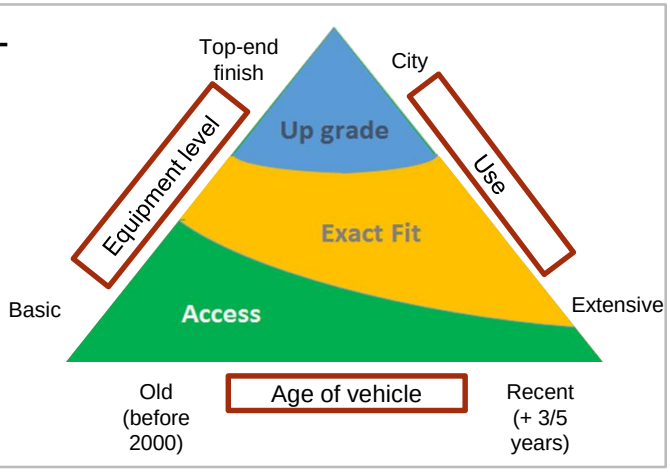

With 24 references covering more than 95% of the European fleet, the Eurorepar range of batteries is designed to satisfy the needs of the market, providing the right level of power and ensuring a suitably long service life.

Modern vehicles are equipped with an increasing number of components (GPS, DVD screens and smartphone interfaces, etc.) which require a reliable energy supply.
That is why we pay **great attention to this type of part**. The tests conducted **have been approved by our experts**.

THE RANGE

The Eurorepar liquid 12-volt batteries are designed to satisfy the electrical requirements of the following types of vehicle:

- modern, top-end (**Upgrade**),
- modern, standard (**Exact Fit**)
- basic (**Access**)

24 models available with different powers and battery tray sizes adapted to assembly on European and Asian vehicles (JIS: Japan Industrial Standard).

CONDITIONS FOR REPLACEMENT

A battery has an average service life of 4 years, but it is advisable to replace a battery as soon as the first signs of fatigue appear. It is advisable to have a load test carried out by a garage in order to assess whether the battery needs replacing

REGULATIONS

Standard EN 50342 and classification W1-W5, C1-C2, V1 -V4; E1
Classification: **W**ater consumption, **C**harge retention, **V**ibration resistance, **E**ndurance

DON'T FORGET

Every time a vehicle is serviced or visits the workshop, offer your customers a free battery test with a view to replacing the battery as a preventive measure before it causes the vehicle to break down.

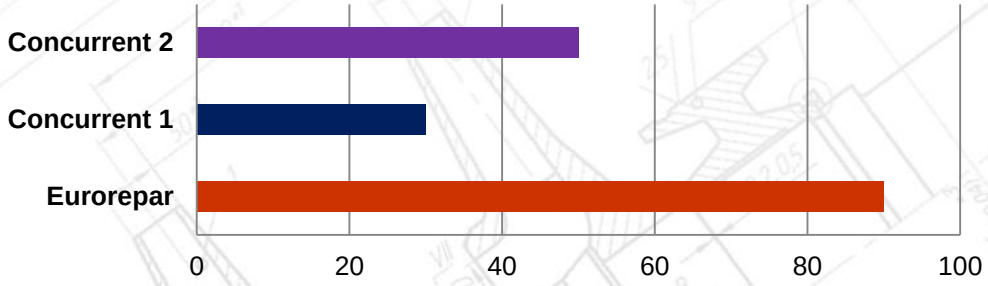

Our parts are guaranteed for **2** years*

SECURE LABELS Avoids any risk to fake parts and guarantees their quality.

www.eurorepar.com

Our parts are guaranteed 2 years* against any manufacturing or material defect.**
(*) For Citroën, DS, Opel, Peugeot, Vauxhall, Eurorepar Car Service repair networks: the warranty runs for 2 years, parts AND labour included.
(**) For the conditions of application, contact your dealer.

DURABILITY

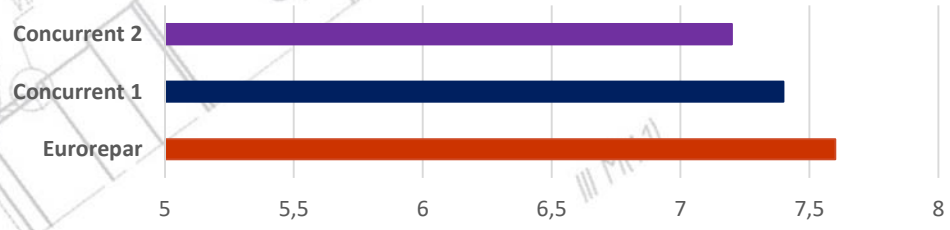

Number of discharge cycles with 100% recovery of nominal capacity

Test conducted according to standard EN 50342-1
50% DOD [cycles]
Ref ERP 16 092 326 80 (60Ah/540A)

Thanks to the technical expertise of our engineering department, Eurorepar batteries have an **excellent capacity for recovering their nominal features**, resulting in enhanced durability compared to their rivals.

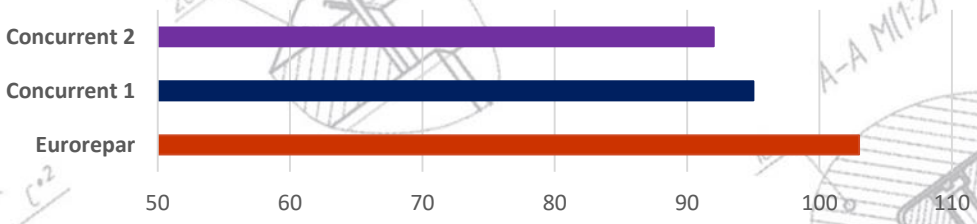

COLD STARTING

Cold cranking test in accordance with EN50342-1:2015 Ref ERP 16 092 326 80

At -18°C, the batteries are subject to a discharge equal to their nominal capacity for 10 seconds. The residual voltage must be greater than 7.5 V to satisfy the EN standard.
A vehicle fitted with a Eurorepar battery will start more easily in cold weather.

POWER SUPPLY PERFORMANCE

Compliance with performances displayed

C20 test in accordance with EN50342-1:2015- Ref ERP 16 092 326 80

The battery's energy capacity is a decisive selection criterion.
The C20 (%) test checks the characteristics displayed by applying a discharge current for a period of 20 hours corresponding to the battery's capacity until a residual voltage of 10.5 V is achieved.
The results show that after 20 hours, the Eurorepar battery provides a voltage greater than that of its rivals.
