ENGINE OILS

NEW RANGE!

Manufacturers' approval panel

9/10 *Vehicles* — ***ONE OF THE BIGGEST ON THE MARKET***

PRODUCT ADVANTAGES

- → ***A full range of synthetic oils for PSA vehicles and vehicles from other manufacturers.***
- → ***Maximum engine efficiency and service life: the more constant molecular structure reduces friction between parts.***
- → ***11 engine oil products and 2 gearbox oils in stock in Vesoul***

Developed in partnership with one of the **main global players in the oil industry**, Eurorepar proposes a range which is among those **satisfying the specifications of the largest number of constructors** available on the market.

- Petrol- and diesel-powered private vehicles
- Vehicles with and without an emissions protection system
- Turbo and direct injection
- Light commercial vehicles
- Conditions for use on motorways and in towns

SELECTING THE RIGHT OIL: OIL SELECTOR

Find the right oil for your vehicle with our oil selection tool. Simply enter the registration number or select the vehicle make, model and engine.

Available at **www.eurorepar.com**

TECHNICAL CHARACTERISTICS

- **Handy-sized containers adapted to your needs**: 1 l, 5 l and barrels of 60 l and 208 l
- Its basic formula is **approved for the vehicles of the PSA group and of all the major manufacturers** (Renault, VW, Ford, BMW, Honda, Porsche, GM, Mercedes, Jaguar Land Rover and, depending on the viscosity, Toyota, Kia, Honda, etc.) and **covers a wide range of vehicle applications** including commercial vehicles and hybrids.
- The Eurorepar oil range combines **very high-quality synthetic oils** with specific additives in order to **enhance performance and the lubricating properties.**

REGULATIONS

The Eurorepar engine oil range is among the very best products available on the market. It complies with:

- ACEA standards.
- PSA certifications.
- The specifications specific to each manufacturer.

OPTIMISED SERVICE PACKAGES

The competitive price of EUROREPAR oil used in conjunction with EUROREPAR oil filters makes it possible to offer optimised oil change service packages.

GENERAL PERFORMANCE

Maximum engine efficiency and service life: the more constant molecular structure reduces friction between parts.

Reduced oxidation and corrosion: its uniform composition leaves little scope for oxygen to take effect.

Fluidity when cold: its excellent performance at low temperatures helps ensure reliability when starting while providing quick protection of the engine and electrical system.

A clean engine: the specific composition of our additives keeps the molecules in suspension and prevents impurities from being deposited on metallic surfaces.

Resistance to temperature: its excellent thermal stability makes it particularly well-adapted to high temperatures and demanding driving conditions

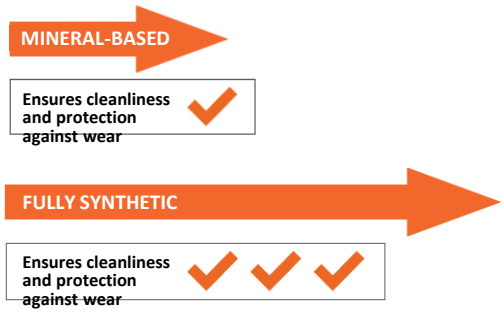

Environmental protection: the low ash, phosphorus and sulphur contents ensure that the emission reduction systems in diesel and petrol engines continue to work efficiently.

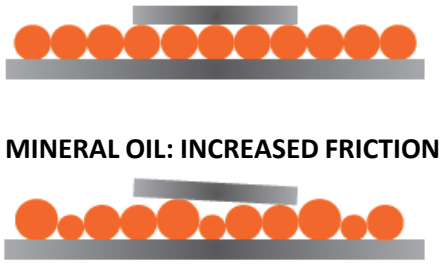

CONDITIONS FOR REPLACEMENT

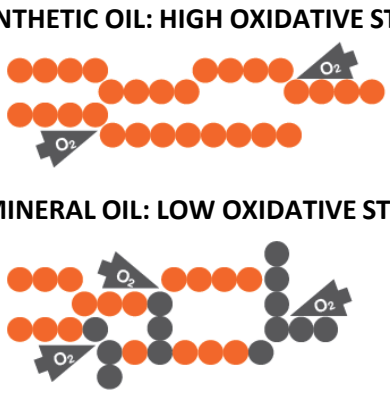

Changing the engine oil and replacing the oil filter at the intervals recommended by the manufacturer guarantees optimum engine lubrication and service life.

Engine oil minimises friction between the different moving parts in the engine and helps cool the engine. During use, it absorbs metallic micro-particles from the engine as well as combustion residues. These cause a deterioration of its properties. It needs to be changed.

WHY ARE ENTIRELY SYNTHETIC OILS BETTER THAN MINERAL OILS?

REMEMBER... ADDITIONAL SALES!!

EUROREPAR OIL ALSO INCLUDES
A RANGE OF LUBRICANTS FOR MANUAL
AND AUTOMATIC GEARBOXES.

ECO FUEL – LATEST EURO REGULATIONS – ENGINE OIL TOP-UP

- European legislation, which sets a cap on emissions of 95 grams of CO_2 per kilometre for all new vehicles delivered from 2021, is forcing vehicle manufacturers to demand increasingly low viscosity engine oils (e.g. 0W)
- A less viscous engine oil can help reduce CO_2 emissions. It creates less friction which means that the demand for engine power is reduced, which consumes less energy. Less friction means lower fuel consumption and therefore lower CO_2 emissions.
- Modern engines are designed to run within a specific operating temperature range in order to control emissions, fuel consumption and engine performance. In addition to aspects concerning cutting CO_2 emissions, each manufacturer also defines specifications for each engine to strike the optimum balance between fuel economy and engine protection, in order to guarantee the engine's performance and service life
- There has been a rise in the number of specifications as a result of each manufacturer having their own strategies.
