EUROREPAR expands its air conditioning range with 52 new condenser products for LVs and LCVs

The condenser is an essential part of the vehicle air conditioning system, and is one of the most prone to damage. As part of our mission to provide maintenance and repair professionals with the most comprehensive ranges possible to meet their needs, Eurorepar is further expanding its range of condensers, with 52 new products.

As it is positioned behind the front bumper to receive as much air as possible, the condenser may be damaged from the most minor frontal collision, but also as a result of splatter from foreign objects on the road.

Eurorepar's range of condensers is made of aluminium due to its cooling properties. It is also given a reinforced anti-corrosion treatment, the effectiveness of which has been proven by several tests, and which ensures high resistance to degradation, resulting in a longer service life.

Eurorepar's condenser range now includes 207 products covering use in over 26,500 LVs such as the BMW Series 1, 2 and 3, Mercedes Class A/B-Class and GLA, Renault Mégane, Scénic, Twingo, Citroën C1, and Peugeot 108, as well as LCVs such as the Fiat Doblo, Ford Transit, VW Transporter and Caravelle, and many more!

With its performance criteria illustrated by a bison in season 2 of our webseries (https://www.youtube.com/watch?v=5F54-CFCN1Q), the Eurorepar condenser range provides a high-quality, multi-brand solution at an affordable price for all repair agents.

About Eurorepar

Present in over 100 countries, Eurorepar is the multi-brand range of automobile products (spare parts, accessories, tyres, oils, consumables, etc.) from the Stellantis Group intended for servicing and repairing vehicles. With more than 12,000 products, Eurorepar provides one of the most extensive ranges on the market, combining quality, affordability and performance. It is perfectly suited to the needs of all repair agents.
