+

FOR PASSENGER CARS & RECENT SUV & POPULAR LCVs

*except the size : 155/65 R14

EXTENSIVE LINE UP

23 Part Numbers
cover the needs of 80 sizes
Better coverage vs comp.

SUITABLE FOR RECENT SUV & MOST POPULAR LCVs
2 sizes for top sellers LCVs
from 14 to 19 inches

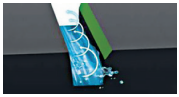

AVAILABILITY
17 sizes available early Q1 2024
6 sizes available from Q2 2024

Optimized side groove design

The attack angle of the main side grooves provides optimized traction and braking performance for all conditions.

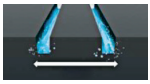

Drainage grooves

For excellent wet performance.

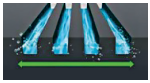

Multiple side grooves

Provides excellent driving performance on wet surfaces thanks to better water evacuation.

2 grooves

4 grooves

2 types of 3D slats

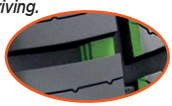

The use of two types of 3D sipes (summer and winter) allows you to obtain a tire that performs well in all seasons. The sipes provide excellent traction and optimal braking performance. The rigidity of the tire is also improved thanks to the 3D sipes, thus limiting irregular wear.

Multi-level rubber bridge

- *The presence of the rubber bridge serves as an indicator of tread wear.*
- *Reinforcement of rigidity between the blocks (reduction of movements) for better safety when driving.*

Peak tread design & snow efficiency indicators

V-shaped side grooves provide excellent cornering grip on both ice and snow. The efficiency indicators allow you to control the height of the rubber in order to know when the tyre is no longer optimal for driving on snow.
